SPIRIT WIC SYSTEM RELEASE NOTES

Build Version 2.03.05

Contents

[SUG-705]

[SUG-705] Gender Change from Male to Female when doing the Guided Script Created: 26/Apr/10 Updated: 10/May/10	
Status:	Open
Project:	SUG - Defects
Component/s:	Missouri

Type:	Bug - Production	**Priority:**	Major
Reporter:	Melissa Seaver	**Assignee:**	Release 2.02.07
Resolution:	Unresolved	**Votes:**	0
Application Module:	Clinic		
Primary Function:	Demographics		
Steps to Recreate:	Create a new participant in pre-screening as male - child. Start CGS to begin the certification process. The gender changes from Male to Female.		
Original Recreation Date:	4/19/2010		

Description

When a male child or infant participant is created or used as existing and starting a cert guided script, it changes the gender from male to female. This is not a critical issue because it does not prevent the CGS from being finished and checks printed. However, it is a Data integrity issue. IU made the priority as major but I think it may need to be critical because of the data issue.

Comment by Eric Wurth [10/May/10 11:35 AM]

Passed....
DB Env: WMOC02Q / WSPCOCN02

This issue has passed all scenarios. The "Gender" text box is stable and the gender (male or female) is no longer changing during any processes within the Clinic application. Value is being saved correctly in the MEMBER table as well.

Assigning issue to Release 2.02.07

[SUG-706]

[SUG-706] System issued benefits to PBF>max mom with infant over 6 months of age
Created: 27/Apr/10 Updated: 21/May/10

Status:	Open
Project:	SUG - Defects
Component/s:	Chickasaw

Type:	Bug - Internal	Priority:	Critical
Reporter:	Melody Schrank	Assignee:	Release 2.02.07
Resolution:	Unresolved	Votes:	0
Environment:	Chickasaw Test		

Software Version:	2.2.10091.1359

Description

1. 2.2.10091.1359 Chickasaw
2. Found existing PBF> max mom and infant > 6 mo old who are due checks
3. Opened the infant record and went to the health information screen
4. Verified BF, Supplemental Feeding date, and solids with today's date
5. Notice to mom that she would not receive benefits did print after saving info on health screen
6. Went to food prescription screen- created a food prescription for the infant dated today.
7. Selected work with another household member from the participant activity dropdown- selected to work with the mother
8. Went to the health information tab and verified that the BF data carried over to the linked infant record that is accessed through the mother's record- it did
9. Went to the food prescription screen and created a new food prescription dated today
10. Clicked the issue benefits icon.
11. Received a message that the mother would not receive food benefits for the benefit period starting 5/7/10
12. The issue benefits screen showed that the mother would receive a half package beginning today, although she should receive no food benefits as she is BF > max and her infant is 10 months old..
13. Clicked print for household- I was able to print checks for the mother.
14. The mother PBF>max should only receive benefits through the last day of the month in which the infant turns 6 months. She should be counted as a participant as long as she continues to BF. We cannot terminate her certification because she would no longer be counted as a participant.

Tested in Build Version - 2.3.10139.2017
DB - WMOC02Q_203

Regressed all the Scenarios for this issue Successfully for Release 2.03.05

Please see the attachment SUG_706_PASS_05192010 for more details.

Comment by Malliga Marutha [20/May/10 01:50 PM]

Note - When doing regression for 2.03.05 we found the following issues:
1) The Issue Benefits Screen was hiding behind the Participant list
2) The Age Category for the INFANTS was displaying incorrectly when there is no Food Prescription available for that month.

Both issues were fixed and are working as expected. These fixes *are not* in Release 2.02.07.

[SUG-726]

[SUG-726] **2.02.06 EOM Failed** Created: 03/May/10 Updated: 12/May/10

Status:	Open
Project:	SUG - Defects
Component/s:	Missouri

Type:	Bug - Production	**Priority:**	Major
Reporter:	Jennifer Saunders	**Assignee:**	Release 2.02.07
Resolution:	Unresolved	**Votes:**	0
Application Module:	Scheduled Job Administration		
Primary Function:	EOM		

Description

Missouri installed and tested 2.02.06 for EOM. They entered the WIC Paid Total and proceeded to the Bank Reconciliation Report dialog. The Control Balance was equal to zero but there was a message at the bottom stating "The sum of the Control Balance does not equal zero. The schedule request is cancelled." This does not appear to be a correct message because the number MO entered was equal to the SPIRIT calculation of the totals.

To get around this and continue the test, Jennifer advised Missouri to set the value of the Scheduled column of the ScheduleJobControl table to Y and manually ran EOM. EOM failed with the following entry in the EOM log:
 "2010-05-03 16:30:55.487 Error: Could not load file or assembly 'CrystalDecisions.CrystalReports.Engine, Version=10.5.3700.0, Culture=neutral, PublicKeyToken=692fbea5521e1304' or one of its dependencies. The system cannot find the file specified.
2010-05-03 16:30:55.487 Ending End of Month process"

I will attach the full log to this issue.

Comment by Eric Wurth [12/May/10 02:20 PM]

Passed.......
DB Env: WMOC02Q / WSPCOCN

All possible scenarios have passed successfully. Able to schedule EOM process when the sum control balances match. When an invalid amount is entered and does not match, Bank Reconciliation Report dialog window appears stating the difference in amount and will not schedule EOM. View and purge log functionality still works accordingly.

Assigning issue to Release 2.02.07

[SUG-736]

[SUG-736] Gender text box is enabled on Demographics screen for a pending cert **Created: 07/May/10 Updated: 10/May/10**

Status:	Open
Project:	SUG - Defects
Component/s:	5 Sandoval, 8 Northern, ACL, Arkansas, Chickasaw, Choctaw, CSC, ITC, Minnesota, Missouri, Montana, Muscogee Creek, Osage, Otoe, San Felipe, Santo Domingo, WCD, Zuni

Type:	Bug - Internal	**Priority:**	Minor
Reporter:	Eric Wurth	**Assignee:**	Release 2.02.07
Resolution:	Unresolved	**Votes:**	0
Software Version:	2.02.06		

Description

When in the middle of a certification, and the stop certification button is selected before completion, all fields for the participant should NOT be enabled due to being a pending cert. However, currently in Clinic, the "Gender" text box is still enabled when it should not.
